- * Benchmark costs and discover significant savings on spending.
- * Benefit from the extensive knowledge and experience of Allday team.
- * Build the right foundations for future growth by optimizing their Facilities infrastructure.

Our Services

PPM Planned Preventative Maintenance Services

(Scheduled Maintenance)

Planned preventative services are scheduled activities that seek to preserve the infrastructure's functional performance and minimize unplanned breakdowns and failures. The preventative tasks are scheduled in accordance with the OEM (Original Equipment Manufacturer) instructions.

***Improved Equipment Life:** The primary aim of PPM maintenance is to enhance the productivity of equipment and prolonging the longevity of building fabric. By ensuring equipment is running efficiently and for a longer time scale, this eliminates the premature replacement of equipment and machinery.

***Decreased Equipment Downtime:** When equipment is operating at its maximum efficiency and there is a reduction in equipment downtime, this in turn increases the productivity of the company.

***Reduced Overhead Costs:** PPM maintenance enhances the longevity of equipment and building fabric so reduces potential expenditure on replacement equipment and building fabric components. There is also likely to be a reduction in the energy supply costs as equipment in good working condition often consume less power. Hence, highly efficient equipment enables the company to increase profits.

***Improved Work Scheduling:** PPM is a more economical use of maintenance engineers and technicians time as they are able to work based on the scheduled plans of the preventative maintenance rather than a reactive basis. Emergency and reactive maintenance often takes time to arrange and causes disruption to the working day. PPM maintenance can support in the prevention of this.

***Circumvention of Large-Scale Repairs:** The regular nature of PPM maintenance prevents the trickle-down phenomena, which is simply the accumulation of small problems into a larger one. As equipment parts or building fabric components in need of repair are noticed at early stages of failure during maintenance checks.

Improved Workplace Safety: The highest levels of safety in the workplace can only be achieved when equipment is working and building fabric is in the best condition possible. There is also a potential to reduce insurance premiums as well-maintained equipment and buildings are considered safer.

Allday experience is acquired through its core FM team having worked on challenging and scalable projects, which ensures delivery of comprehensive and innovative FM solutions.

Allday local knowledge enables the provision of a tailored solution that considers the cultural and economic sensitivity of each project.

Our Message

In the ever-changing market environment we are living, we are proud of our well versed experience and acquaintance in all different service constituents of the industry we operate in. We are always adapting and diversifying what we offer to meet the up-to-date market and customers' requirements and to creatively destruct the traditional way of the handling and management of projects. At Allday we firmly believe that the "devotion" we apply in every distinctive challenge coming in front of us, is the key element in persuading customers to choosing our quality services. We trust our presence to bring overwhelming success to any undertaking and will furnish projects with excellency and cost efficiency across the board in every business decision – including the one for hiring us; this will surely be well witnessed on all potential fronts. We personally look at every business dealing as more of an opportunity to get to know people and be introduced to new firms; as we see it, it is all about building everlasting relationships on the personal and impersonal levels.

CIVIL MAINTENANCE SERVICES

Civil Maintenance Services

All day experienced team also attends to the fundamental issues of civil maintenance services. Focusing on the exterior and interior elements, the team provides a full suite of services. We will help you save time and energy spent finding multiple contractors, by meeting all your civil and structural needs under one roof. We are focused and determined to deliver what we promise – the effective and efficient management of people and the implementation of cutting-edge technologies, which will continue to keep us rooted as a growing organization and fuel our future growth objectives.

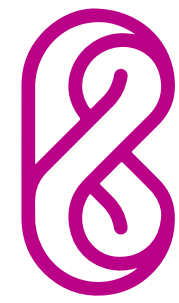

M.E.P

MEP is the core of maintaining and protecting the value of a building. Allday commitment to employing expert technicians with specialist knowledge, and subsequently supplementing this human capital with continuous training and improvement engenders deep trust from our clients.

All appliances require regular attention to avoid faults. Failure to correctly operate and maintain these appliances will lead to severe distress to the building's tenants. This is why it is essential to have a competent and experienced FM team onboard. Allday is able to mitigate this risk with a thorough operation program, preventative maintenance program, and sufficient on-site presence to be able to react quickly and appropriately if needed.
